1.FAQ about ICP filing preparations

1.1. FAQ about ICP numbers

This topic describes the frequently asked questions about ICP numbers.

- [Why is an ICP number revoked?](#)
- [Can I restore my ICP number after it has been revoked by the administration office?](#)
- [What is the validity period of an ICP number?](#)

Why is an ICP number revoked?

Your ICP number may be revoked in the following situations:

- The ICP filing entity (individual or enterprise) submits a cancellation application to the administration office or service provider.
- The domain name has expired and been deleted, and the new registrant has submitted a cancellation application to the administration office.
- Your website information is not authentic or accurate, or the ICP filing information is missing. Therefore, the service provider cancels the ICP filing. If the filing information is not hosted to a new service provider for a long time after cancellation, the administration office will revoke the ICP number.
- If your website contains illegal information, the administration office will revoke your website and entity ICP numbers. In serious cases, the entity information will be blacklisted, and your credential number and website name will be permanently denied for ICP filing.

Can I restore my ICP number after it has been revoked by the administration office?

An ICP number cannot be restored once it has been revoked, and the corresponding website cannot be accessed. We recommend that you apply for ICP filing for your domain name as soon as possible. Your website will be accessible after the administration office approves it.

What is the validity period of an ICP number?

At present, the administration office does not set a validity period for ICP numbers. If your filing information is authentic and accurate, apply for ICP filing change promptly to modify the filing information, or apply for ICP filing to change to another service provider. Your ICP number is permanently valid if your website content does not involve any illegal information.

1.2. FAQ about service identification numbers

A service identification number for an Internet Content Provider (ICP) filing is a verification code that associates the website involved in the ICP filing with the corresponding Alibaba Cloud instance when you enter the ICP filing information in the Alibaba Cloud ICP Filing system. This topic describes some common questions that you may encounter when you apply for a service identification number for an ICP filing.

- [How do I apply for a service identification number for my IoT package?](#)

- How do I obtain a service identification number for an ICP filing if I did not purchase any Alibaba Cloud instance?
- Why does it show that this ECS instance does not have an IP address that supports ICP filing application?
- Why am I unable to see the Apply button on the ICP No. Application page?
- Can I reuse a service identification number?
- After I cancel an ICP filing, can I reapply for the service identification number?
- What can I do if my service identification number quota is exhausted?

For more information about the procedures and precautions for applying for a service identification number, see [Apply for service identification numbers](#).

How do I apply for a service identification number for my IoT package?

You can apply for a service identification number if your IoT subscription duration is six or more months and the amount of a single order is USD 14 or more. For more information, see [Apply for service identification numbers](#).

How do I obtain a service identification number for an ICP filing if I did not purchase any Alibaba Cloud instance?

You must purchase an Alibaba Cloud instance that supports ICP filing application to apply for a service identification number. For more information, see [Purchase and prepare an instance](#). For more information about how to apply for a service identification number, see [Apply for service identification numbers](#).

Why does it show that this ECS instance does not have an IP address that supports ICP filing application?

Alibaba Cloud Elastic Compute Service (ECS) instances that support ICP filing application must be deployed in , be purchased by using the subscription billing method, and have a public IP address. If you do not have a public IP address, purchase public bandwidth first. For more information, see the [Modify public bandwidth](#) section of the [Overview of instance upgrade and downgrade](#) topic.

Why am I unable to see the Apply button on the ICP No. Application page?

The **Apply** button is not displayed in the Operation column of your instance. This issue may be caused by the following reasons:

- Your Alibaba Cloud account is not the one that is used to purchase the instance. Log on to the ICP Filing Management console by using the Alibaba Cloud account that is used to purchase the instance, and use this account to apply for a service identification number.
- You chose the pay-as-you-go billing method for your ECS instance. Pay-as-you-go instances do not support ICP filing application. Switch the billing method [from pay-as-you-go to subscription](#) and purchase a subscription of three months or more.
- If you use a subscription ECS instance and the remaining subscription time meets the requirements for applying for an ICP filing, check whether public bandwidth has been purchased for the instance. If no public bandwidth is purchased for the instance, purchase bandwidth as required. For more information about how to purchase public bandwidth, see the [Modify public bandwidth](#) section in the [Overview of instance upgrade and downgrade](#) topic.

- You chose the subscription billing method for your ECS instance, but the remaining subscription time is less than three months as required for ICP filing application. In this case, renew the subscription. If your ECS instance does not meet the requirements for applying for an ICP filing due to configuration changes, check the configurations to make sure that your instance meets the requirements.

For example, you are not allowed to apply for a service identification number if the bandwidth configuration is downgraded to 0 Mbit/s or the billing method is changed to pay-as-you-go.

- Your instance has expired. You cannot apply for a service identification number for an expired instance. In this case, renew the subscription.
- The number of service identification numbers that you can apply for has reached the upper limit. We recommend that you apply for service identification numbers by using another qualified Alibaba Cloud instance.

For more information about the quantity of service identification numbers that can be applied for each instance, see the "Supported instance service types and maximum number of supported websites" section in the [Prepare and check the instance and access information](#) topic.

- The Alibaba Cloud instance that you purchased is not deployed in . Only domain names that are resolved to instances deployed in and provide services require ICP filing application. The ICP filing is not required if the domain name is resolved to an instance deployed .

Can I reuse a service identification number?

No. If you have used a service identification number to obtain an ICP filing for a domain name, you cannot use this service identification number to apply for an ICP filing for another domain name.

After I cancel an ICP filing, can I reapply for the service identification number?

No. After you cancel your ICP filing, the corresponding service identification number is deleted. You cannot reapply for this service identification number.

What can I do if my service identification number quota is exhausted?

If your service identification number quota is exhausted, you must purchase a new instance and use the new instance to apply for more service identification numbers.
