Generic conventions

Table -1: Style conventions

Style	Description	Example
	This warning information indicates a situation that will cause major system changes, faults, physical injuries, and other adverse results.	 Danger: Resetting will result in the loss of user configuration data.
	This warning information indicates a situation that may cause major system changes, faults, physical injuries, and other adverse results.	 Warning: Restarting will cause business interruption. About 10 minutes are required to restore business.
	This indicates warning information, supplementary instructions, and other content that the user must understand.	 Notice: Take the necessary precautions to save exported data containing sensitive information.
	This indicates supplemental instructions, best practices, tips, and other content that is good to know for the user.	 Note: You can use Ctrl + A to select all files.
>	Multi-level menu cascade.	Settings > Network > Set network type
Bold	It is used for buttons, menus, page names, and other UI elements.	Click OK.
<code>Courier</code> font	It is used for commands.	Run the <code>cd / d C :/ windows</code> command to enter the Windows system folder.
<i>Italics</i>	It is used for parameters and variables.	<code>bae log list --instanceid Instance_ID</code>
[] or [a b]	It indicates that it is an optional value, and only one item can be selected.	<code>ipconfig [-all -t]</code>

Style	Description	Example
<code>{}</code> or <code>{a b}</code>	It indicates that it is a required value, and only one item can be selected.	<code>swich {stand slave}</code>

3 Overdue payments.....	5

1 Billing method

Elastic IP Addresses (EIPs) are charged and billed on a Pay-As-You-Go basis.

Pay-As-You-Go

The billing method of Pay-As-You-Go means you are billed after each EIP is used. Pay-As-You-Go EIPs are charged based on traffic. The Pay-As-You-Go EIP features are as follows:

- You can release a Pay-As-You-Go EIP at any time. After a Pay-As-You-Go EIP is released, the bill for the last day or hour is generated and fees are deducted in the next day or hour. For more information, see [Release an EIP](#).
- After an EIP is associated with an ECS instance in a VPC, the EIP is free from the instance fee. If the EIP is associated with a NAT Gateway, Server Load Balancer (SLB) instance, secondary Elastic Network Interface (ENI), or High-Availability Virtual IP Address (HaVip), the instance fee is charged and billed.

For more information about the billing method of EIPs, see [Pay-As-You-Go](#).

2 Pay-As-You-Go

Elastic IP Addresses (EIPs) are charged with the traffic-based billing method of Pay-As-You-Go. This topic describes the billing method of EIPs.

Billing items

The total fees of an EIP include an instance fee and a traffic fee. EIPs are billed and charged on an hourly basis. Billing periods less than an hour are calculated as an hour.

The instance fee and traffic fee are calculated as follows:

- Instance fee = unit price (USD/hour) × usage period

The usage period refers to the period between the time when the EIP is created and the time when the EIP is released.

- Traffic fee = unit price (USD/GB) × charged traffic

The charged traffic refers to the cumulative outbound traffic of the EIP to be billed in an hour.

Note:

Modifying the peak bandwidth does not affect the unit price. However, we recommend that you set the bandwidth based on your actual needs to avoid generating excessive charged traffic due to malicious access.

Pricing

The following table lists the unit prices of the instance fee and the traffic fee.

Note:

If the price on the purchase page is different from the price listed in the following table, take the price on the [purchase page](#) as the standard.

Region	Instance fee (USD/hour)	Traffic fee (USD/GB)
China (Hangzhou), China (Shanghai), China (Beijing), China (Zhangjiakou), China (Shenzhen), China (Hohhot)	0.003	0.123
China (Qingdao)	0.003	0.11

Region	Instance fee (USD/hour)	Traffic fee (USD /GB)
Hong Kong	0.009	0.153
Singapore	0.006	0.081
Japan (Tokyo)	0.005	0.087
USA (Virginia)	0.005	0.076
US (Silicon Valley)	0.005	0.077
Germany (Frankfurt), UK (London)	0.006	0.070
UAE (Dubai)	0.009	0.447
Australia (Sydney)	0.006	0.096
Malaysia (Kuala Lumpur)	0.003	0.077
Indonesia (Jakarta), India (Mumbai)	0.006	0.090

Example

In this example, the following EIP is used:

- Assume that you created an EIP in the China (Hangzhou) region at 9:30 of one day and set the peak bandwidth to 10 Mbit/s.
- Then you immediately associated this EIP with an ECS instance and used the EIP to access the service deployed on the EC instance.
- Assume that you changed the EIP bandwidth twice that day:
 - At 17:00, you changed the bandwidth from 10 Mbit/s to 20 Mbit/s.
 - At 23:00, you changed the bandwidth from 20 Mbit/s to 15 Mbit/s.

For the preceding example, the total cost of this EIP for the day you created it is USD 7.5.

- **Instance fee:**

No EIP instance fee is charged. This is because the EIP is associated with an ECS instance of the VPC network.

- **Traffic fee:**

- The total traffic consumed by the EIP that day is 60 GB.
- The unit price of the traffic fee in the China (Hangzhou) region is USD 0.125 per GB.
- The traffic fee is calculated through the following formula: $0.125 \text{ USD/GB} \times 60 \text{ GB} = \text{USD } 7.5$.

3 Overdue payments

If an EIP bill is overdue, your service may be affected. Therefore, we recommend that you renew your EIP in time to avoid service interruptions.

1. If an EIP bill is overdue, or if your payment is not received, you will get an email.
2. The EIP functions normally within the 15 days after the bill is overdue.
3. The EIP service will be suspended after the bill is overdue for more than 15 days.
4. If you renew your EIP within 15 days after the service is suspended, the service is automatically restored. Otherwise, the EIP address will be released 15 days after the service is suspended. The account owner will receive an email notification.
